Driving Motors and their Use

The mechanical and electric motors shown here are interesting additions to your MÄRKLIN Construction Set. The drive to the smaller models can be taken either from the mechanical or from the plain type electric motor. Best suited for the large models is the universal type electric motor.

Mechanical Motor, reversible, for right or left hand rotation. Two speeds. With winding key and instructions. Packed in carton.

Mechanical Motor

1322 G

Universal Type Electric Motor, 20 Volts. With cord and change-over switch for remote control of direction of rotation. 2 cord pulleys rotating at various speeds in opposite directions, adjusting through transformer. Very efficient motor, high pulling force, suited for even the largest models, also for driving dynamos and all types of action models.

Electric Motors

1321 G

Electric Motor, plain type. Reversible for right and left hand rotation. Operates on 20 volts, so that it can be connected to any MÄRKLIN railway transformer. Accessories: 2 cords 4891 (red and brown).
